# A Complete Pumping Service for the Petroleum Industry

Pumps for: Field Work · Main Line Stations · Refineries · Gasoline Plants

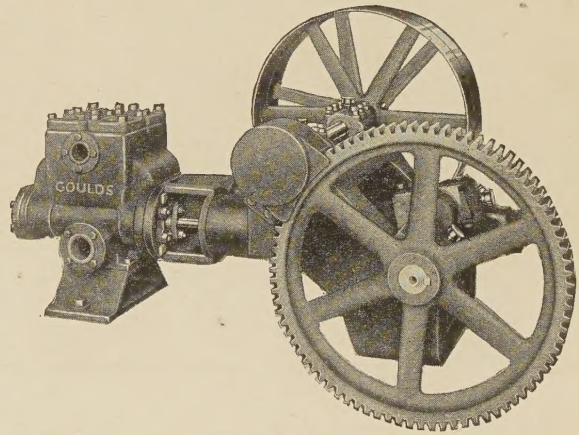

## STATION PUMPS

Horizontal, double-acting, outside packed plunger type, either duplex or triplex. Capacities up to 25,000 barrels per 24 hours. Pressures up to 1,000 lbs. Complete specifications in Bulletin 115.

## CENTRIFUGAL PUMPS

Single and multi-stage for oil circulating—main charging—spray and respray service—handling gasoline and light distillates—condenser service—boiler feed—brine circulation and many other applications. Specifications in Bulletins 105, 111, 118, 119, 125 and 129.

## GATHERING PUMPS

Horizontal, double-acting, duplex piston packed types. Capacities, 3,100 to 5,500 barrels per 24 hours. Pressures, 400 to 600 lbs. Certain sizes are so designed that cylinder liners can be changed to increase or decrease the pump capacity in proportion to the pressure. Specifications in Bulletin 115.

## Publisher's Announcement

---

THE 1927 issue of THE PETROLEUM REGISTER marks the tenth anniversary of its establishment by the present publisher. Throughout this period THE REGISTER has demonstrated its ever-increasing value to the oil industry and allied trades. Each succeeding issue has furnished a larger and more detailed directory of the various branches of the petroleum business, more accurate and detailed data and the introduction of features and departments which experience has found necessary and desirable to make the book fully representative of the industry it serves.

The listings of Producers, Refiners, Marketers, Compounds, Natural Gasoline Manufacturers and Pipe Line Companies are more numerous than in any previous issue, and no effort nor expense has been spared to insure full and correct information.

The BUYERS GUIDE, again enlarged, is a compact catalogue of equipment and supplies, alphabetically arranged and covering an extensive line of products.

An important new feature is the concise assembling, under the head "Special Listings," of companies that have been merged or absorbed under new names, and others no longer in business. This section has been compiled in response to many requests and no doubt will prove valuable for reference purposes.

The MARKETERS SECTION has been rearranged in compliance with a widely expressed demand. Companies are listed alphabetically by States, permitting of ready segregation for both consulting and filing. Refiners particularly will be interested in this innovation.

The PERSONNEL DEPARTMENT, containing the names and positions of leading oil executives, has been revised and many important additions have been entered. The introduction of this feature in last year's issue met with warm approval.

The full membership list of the American Association

of Petroleum Geologists appears in this issue, and under the heading of "Data Received Too Late for Classification," will be found many last minute changes and financial reports received after the regular sections had gone to press. The names of all companies in the latter section are fully indexed, and where the information given concerns a company appearing in the regular departments, reference in the Index is made to both pages on which data appear.

Further evidence of the esteem in which THE PETROLEUM REGISTER is held by advertisers is found in the greatly increased volume of business appearing in the current issue. The country's great oil companies, manufacturers, equipment dealers, professional and financial interests identified with the petroleum industry are represented to a greater extent than ever before.

Acknowledgment is made to the Bureau of Mines, the American Petroleum Institute, various oil company officials and others who have co-operated in furnishing data and statistics.

Attention is again directed to the fact that while every care has been taken in compiling information, and financial reports appearing in THE REGISTER are obtained from trustworthy sources, strict accuracy cannot be guaranteed, and in no case are figures or facts given with the idea of supplying material on which to base credit ratings.

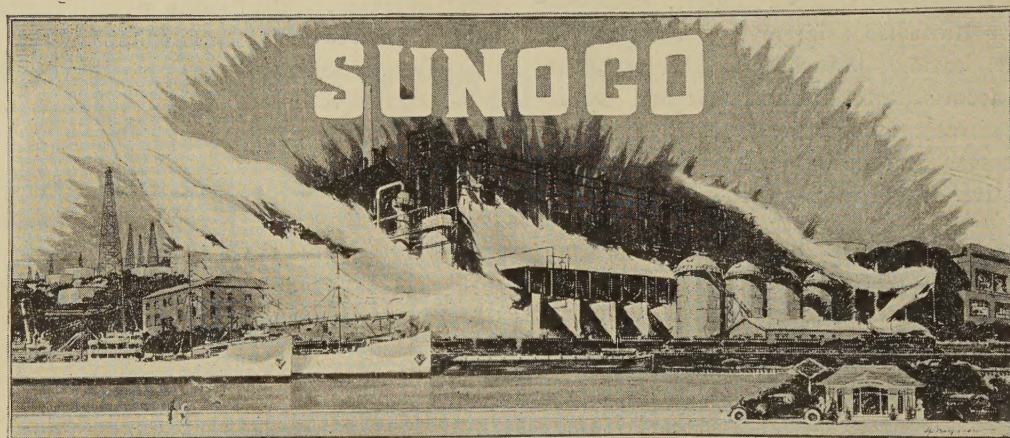

The contents of THE PETROLEUM REGISTER are protected by copyright, and matter appearing herein may not be reproduced without express permission. In no instance is authority given to use material in THE PETROLEUM REGISTER for promotion or stock-selling purposes.

# OUR PRODUCTS REFLECT THE PROGRESS of FORTY YEARS WORK

From a modest beginning in 1886 in the oil fields of western Pennsylvania, to almost world-wide interests—this Company is now realizing the dreams of its founder.

From seventeen states of this country and from foreign countries, crude oil from our own wells is carried by our own pipe lines, our own tank cars and tank steamships to our own refineries.

52,377,882 gallons of lubricating oils last year was our contribution to make the wheels of industry run more smoothly.

Sunoco, the Distilled Motor Oil, causes neither hard carbon nor fouled spark plugs. Sunoco Gasoline, Sunoco Greases and other petroleum products for every industrial use, some of them exclusive specialties under the Sunoco trade mark, will render better service because of the continually improved processes, and the most modern and almost revolutionary equipment, by which they are manufactured.

With ample resources and forty years' experience, we are determined that our products shall always maintain an unrivaled quality worthy of the Company's ideals.

# Fewer Parts Than In Any Other Air Compressor!

That is why the Dayton Air Compressor stands up to its work—it is the only two-stage compressor built which has no connecting rod or cross-head pin.

"

No bolts or cotter pins to come loose and cause trouble. Self-aligning bearing is another feature of superiority. This is the

## The Premier American Made Ball For Working Barrel Service

Manufactured to the highest standard of accuracy and linked to a world wide reputation. Nowhere will you find a ball that so nearly embodies the features of accuracy, uniformity and quality as Atlas Balls.

ATLAS Balls are enduring the click-ety-click of enormous pipeline pressure—they are holding up under the pounding, racking service of working barrels.

Every Atlas ball is guaranteed to be round and true to size within plus or minus 1/2 of 1/10,000", perfectly finished and free from all surface defects.

*Made in Steel, Bronze, Monel  
and Special Alloys*

## The Same Test that Railroads Use in Buying Rails

Every length of Chester Pipe must pass the Crop-End Test. Both crop ends are crushed and examined as an additional important physical test to check the character of weld and metal of each length of pipe.

By the system of duplicate numbers on pipe and crop-ends, identity is immediately established. Rejects are returned to the mill on the Return Runway.

The usual method of testing and checking heavy duty material is to take a small percentage of the number of pieces for test purposes. South Chester Tube Company goes to the extreme of making two tests of each piece which represents a 200% check.

This is but one of the means Chester employs to insure 100% satisfaction in its product. The wide use of Chester Pipe is evidence that this care is appreciated.

# VICTAULIC

REG. U. S. PAT. OFF.

## FLEXIBLE LEAKTITE PIPE JOINTS

Easily fitted—standardized for steel and cast iron pipes in sizes from 1" up.

Victaulic Joints are suitable for all pressures from vacuum to over two tons per square inch—for standard and extra heavy pipe.

*An extensive user in the oil fields states that, compared with screwed piping, twice as many lengths can be laid in a day when Victaulic Joints are used—and fewer men are needed.*

The Victaulic Coupling has met with popular favor wherever used.

### The Greater the Pressure or Vacuum—the Tighter the Joint

The Victaulic Joint consists of two half housings, two bolts and an inner ring. The housings serve to center the leak-proof ring over the ends of the pipes and join the pipes together, allowing such clearances as are necessary to obtain the standard flexibility and expansion. The pressure within the pipe presses the lips of the ring against the pipe—the greater the pressure, the tighter the joint becomes.

For typical installations, list of uses and users, write for Victaulic Bulletin "E".

# High and Low P R E S S U R E

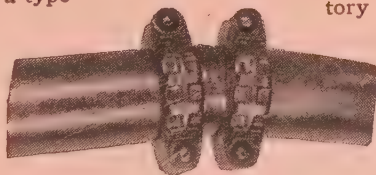

Wherever oil is produced Smith Oil and Gas Separators are being used in steadily increasing numbers, conserving the oil at full casing head gravity and the gas for fuel, for the gasoline plant or for the pipe line.

Developed in the Oil Country, by practical oil men, to meet a conservation need, Smith Oil and Gas Separators have been adopted as standard equipment by the largest producers in the Industry.

There's a size for every purpose . . . a type to meet every production need.

## VICTAULIC LEAKTITE PIPE JOINTS

Victaulic Pipe Joints are rapidly winning a place in the Oil Industry because of their high efficiency, their economy in first cost and the low cost of line-laying. Victaulic Pipe Joints are distributed to the Mid-Continent and California territory by this organization.

16x16	7870		

## Equipment Furnished

for

### Cable Drilling

Ajax Engines complete, for Cable Drilling, include throttle, valves, lubricator, pump, heater, exhaust flange and pipe, pulley, flywheel and all balance rings, and box of fittings containing foundation bolts, grease cups, oil cups, drain cocks, keys, gaskets, wrenches, etc. Engines Stripped for Cable Drilling are furnished with same equipment as for complete engines, with the exception of pump, heater and balance rings. Unless otherwise specified, the following Pulleys will be shipped with both Complete and Stripped Engines for Cable Drilling.

28x12 Pulley with 10x12 to 12x12 Engines  
36x14 Pulley with 13x14 and 14x14 Engines  
40x14 Pulley with 14x16 and 16x16 Engines

### Rotary Drilling

Engines Complete, for Rotary Drilling, include throttle valve, lubricator, pump, heater, exhaust flange and pipe, rotary fly-wheel, 12-tooth steel driving sprocket for No. 1240 chain, and box of fittings same as for cable drilling.

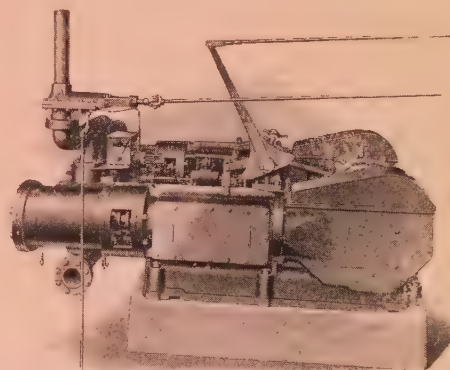

Engines Stripped for Rotary Drilling are furnished with same equipment as for Complete Engines for Rotary Drilling, with exception of pump and heater. If desired, special size sprockets for No. 1030 or 1240 chain or special size pulleys can be furnished.

**POWER**—Apply to National Supply Companies for charts showing brake horsepower developed by Ajax Engines at all speeds with boiler pressures up to 150 lbs.

**OUTBOARD BEARING**—Special equipment on all sizes Ajax Engines.

**ENCLOSED CRANKCASE**—Gives splash lubrication to all wearing parts.

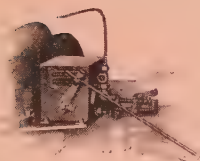

**COUNTER BALANCED CRANKSHAFT**—Now used in all enclosed Ajax Engines. Crankshaft diameter in engines from 10x12 to 12x12 is now 4½ inches.

## IDEAL-AJAX TWIN DRILLING ENGINES

Open Type		Enclosed Type	
Sizes	Weight Lbs.	Sizes	Weight Lbs.
10x10	5500	10x10	6500
		12x12	9000

## AJAX-CARSON LUBRICATOR

Improved sight feed lubricator for all drilling engines. Mechanically operated, valveless, cannot get out of order, amount of oil forced into cylinder adjusted to speed of engine. Positive sight feed shows operation of lubricator at all times.

Enclosed type Ideal-Ajax Twin Drilling Engine. For power charts at varying speeds and boiler pressures, apply to the National Supply Companies.

Enclosed crankcase gives splash lubrication to all wearing parts.

## AJAX GREENWOOD VALVE

A positive throttle valve with automatic safety feature. When closed to shut down engine it opens a by-pass releasing steam under compression from cylinders and manifold. Prevents accidents by making it impossible for engine to turn over after being shut off.

Write or call upon any branch of the National Supply Companies for complete information and specifications on all models of Ajax and Ideal Engines. New models are on display and complete stock of genuine replacement parts are kept on hand at all National Supply Stores.

## Oil Well Lines That Deliver Service

THE right combination of strength, flexibility and elasticity for its purpose—that's what Wickwire Spencer puts into every strand of wire rope.

Careful study of requirements in the oil fields, together with many actual tests on the job, established our specifications. Careful selection of the steel from our own mills, and complete control of every step in manufacture, from the iron ore to the finished product, enables us invariably to meet these specifications.

Drilling lines, sand lines, casing lines, pumping lines, or torpedo lines—all are dependable if they are Wickwire Spencer Lines.

## Tank Car Leases

*With unparalleled auxiliary features*

In addition to the leasing of tank cars, North American Car Co. offers several practical services to shippers which will pay you to keep in mind. These include:

### OIL STORAGE FACILITIES

Bulk and loaded-car storage at Tulsa, New Orleans and Chicago where oils awaiting further disposition may be stored under usual North American Oil terminal warehouse arrangements. (The New Orleans facilities are of special interest to EXPORTERS.)

### CAR REPAIRS

Complete shops at Chicago, Coffeyville, New Orleans and Tulsa, for the repair of refinery tank cars.

### CAR PARTS

Draft gear parts, safety valves, couplers, brake shoes, arch bars, etc., shipped immediately from stock from any of the car shops mentioned above.

N. A. service is economical, efficient, and worthwhile.

Cooper Gas Engines direct driving compressors for compressing natural gas, casinghead gas, ammonia and air are built in standard sizes from 80 to 1,300 B. H. P. They are also built in the same range of sizes for driving electric generators and other power purposes.

They are of the four cycle slow speed type built to give uninterrupted, full-load, service at a low operating cost for fuel and maintenance.

Photograph shows a cross section of  
85 and 170 B.H.P. size.

# Champion Air Compressor

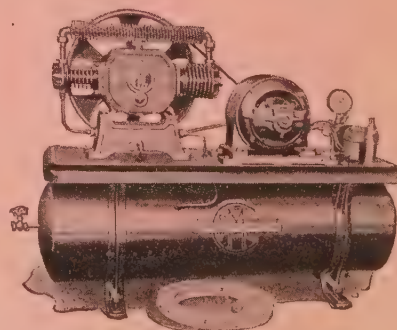

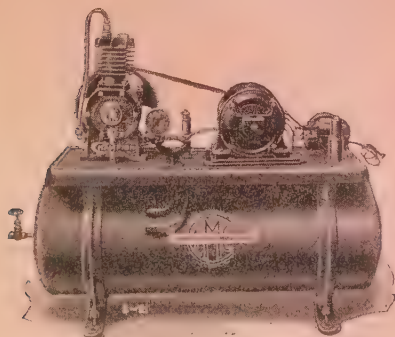

## Single and Two Stage

Champion equipped "filling stations" not only rendered an *uninterrupted* free air service but *reduce* the cost of this service because of their high operating efficiency and low operating and maintenance cost.

This is due to Champion's "in-built" qualities. Annular Ball Main Bearings—Positive Oiling System—Better Cooling—Non-Pulsating Check Valve—Quiet Operation—No Vibration—yes, and many other exclusive features that will interest you.

# PROTECTOMOTOR

## HIGH EFFICIENCY AIR FILTERS

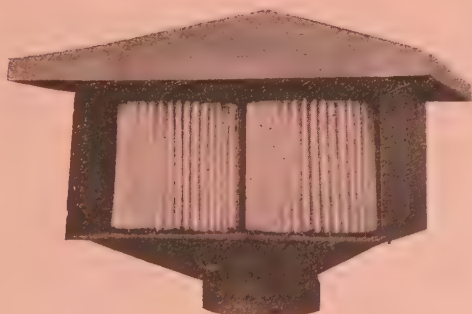

Adopted as Standard  
by Leading Manufac-  
turers of Motor  
Trucks & Mobile  
Equipment

Complete Protection  
for Oil & Gas Engines,  
Air Compressors  
& Field Genera-  
ting Sets

*Efficiency*

*Endurance—Adaptability*

Protectomotor Industrial Air Filters are completely self-contained and weather-proof, and require no additional casing or duct work for connection to your free air intake. The illustration shows a typical upright 1000 cfm. Protectomotor Industrial unit with side plate removed to show construction.

Protectomotor Air Filters are built to the highest standards of efficiency ever attained in actual operating practice. Maintenance of Protectomotor units is reduced to a ten-minute cleaning operation at intervals of two to six months' continuous operation.

Protectomotor Air Filters are adaptable to the most exacting installation requirements on either portable or stationary internal combustion engines and air compressors—standard fittings are supplied for all makes of motor trucks, tractors, and portable machinery—there is a Protectomotor for every capacity and every possible type of air filter service.

# A Complete Line of Car Tank Accessories

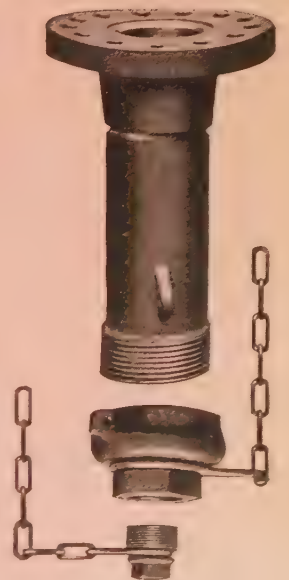

The workmanship on Trumbull Valves is the kind that might reasonably be expected of an institution established in 1850 and carrying down through the years a heritage of work carefully and conscientiously performed.

Extreme care is used in the selection of all material in the manufacture of Trumbull Valves. Housings, collars, elbows, spiders, and plugs are cast of certified malleable. The valve itself is of high grade close grained grey iron. All parts are in exact accordance with American Railway Association Specifications.

All Trumbull Dome Rings and Lids are made in strict accordance with American Railway Association Specifications. Bearing Surfaces on each type of lid are carefully machined with utmost exactness in order to facilitate the making of an absolutely gas tight seal. Both rings and lids are cast of the highest quality certified malleable iron free from blow holes and other imperfections.

Trumbull Outlet Legs are built in strict accordance with the American Railway Association Specification. Valves are machined and ground to extremely close limits of tolerance and the valve seat is likewise ground to limits which insure absolute and definite action of the valve when seated. The breakage groove is not cast but is actually machined into the legs as required by the specifications.

# PENFLEX

## Gasoline and Oil Conveying Hose and Connections

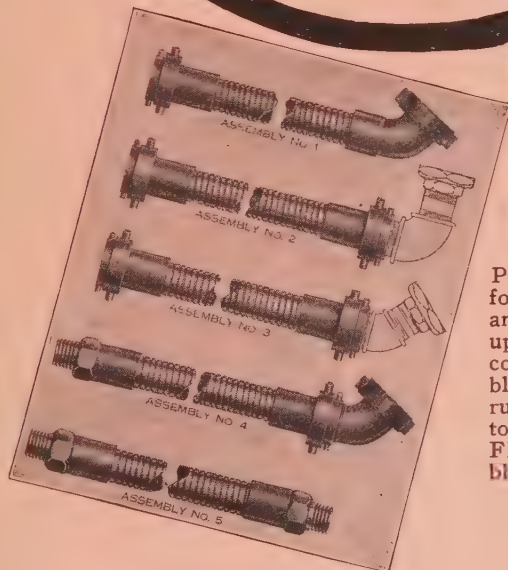

PENFLEX Guar-  
anteed, leak-proof  
Gasoline Hose—  
Longer life—  
lowest cost.

The ever increasing demand of the industry for flexible metal hose combining great strength, and pressure resistance, long life and stability with a wide range of flexibility has been constantly served for many—many years by PENFLEX—the pioneer manufacturer of such hose. Vast manufacturing facilities and volume production has built for PENFLEX the slogan of "highest quality products at the most economical cost." It will pay you to get PENFLEX prices and specifications.

PENFLEX  
Automatic Barrel  
Filler

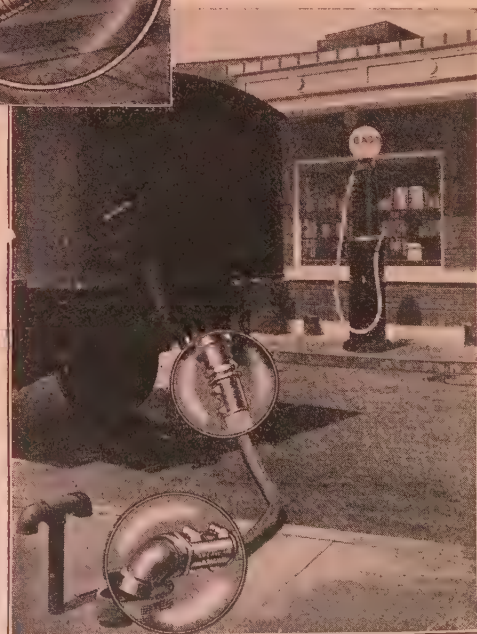

The most efficient and durable filler made—nationally used. Furnished either with plain galvanized PENFLEX hose or PENFLEX fabric covered, rubber insulated gasoline hose.

PENFLEX Gasoline Hose, for Service Station Pumps and Tank Wagons, in sizes up to 3" I. D. Extra heavy construction of special durable fabric over thick, live rubber insulation vulcanized together and onto PENFLEX galvanized steel flexible hose.

PENFLEX Tank Car Unloading Hose fitted with PENFLEX Couplings provide the most efficient and economical unloading connection possible. The resistance of PENFLEX all metal construction to severe external wear gives it a life many times that of any other type of hose.

**B**Y much improved tankage the producer is now handing on to the pipe line the large evaporation losses he formerly suffered.

Pipe line companies have found by experience that they, too, can hold these light ends by using Oceco equipment. And the cost is a very small fraction of the loss from tanks not properly protected.

# "A fine Group of Tanks-but why don't you "Protect them?"

Flame Arrestor

**FIRE LOSS** can be eliminated and evaporation reduced to a minimum by the use of Oceco—*equipment with a service record.*

Oceco Equipment has proven its value by years of use, and is protecting millions of barrels of tankage the world over.

Upon request we shall be glad to mail you a copy of the new Oceco Catalog featuring the complete line of Oceco Equipment.

## Products

**PUMPS**—All types: Steam and Power, Reciprocating and Centrifugal, including deep-well.

**CONDENSING APPARATUS**—Surface, Jet and Barometric.

**COMPRESSORS**—Air, Gas and Ammonia.

**DIESEL OIL ENGINES**—Single-acting, two and four-cycle; double-acting, two-cycle.

**GAS ENGINES**—For natural and blast-furnace gas; power and compressing units.

**METERS**—Boiler-feed, Water, Oil.

**FEEDWATER HEATERS**—Locomotive and Stationary.

## Pumps

Worthington makes a complete line of pumps covering every oil field, pipe line and refinery requirement. Of special interest are Worthington Hot Oil Pumps.

## Steam Pumps

The Worthington line of steam-driven, reciprocating pumps includes simplex and duplex types; simple, compound and triple expansion; condensing and non-condensing; in all sizes and designs to meet every service requirement. Capacities range up to 15,000 gal. per min.; pressures from less than atmosphere to 12,000 lb. per sq. in.

Among the more commonly used types are the following:

General-service valve-plate pattern, for boiler feeding and general service. Removable-liner pattern for handling gritty or sandy liquids. General-service turret pattern. General-service straightway pattern. Valve-plate type. Pot-valve type. Piston type. Plunger type. Forged fluid end-type for hot oils.

Other types of pumps are also manufactured, there being a Worthington steam pump for every need.

## Centrifugal Pumps

Open impeller pumps are made in sizes from 1 to 8 in. Single-stage hydraulically-balanced centrifugal pumps designed for conditions requiring high efficiency, are built for heads up to 200 ft. and for capacities up to 60,000 gal. per min. Hydraulically-balanced two and four-stage pumps, for heads over 200 ft. are made in sizes from 2 to 8 in.; capacities; 50 to 2,500 gal. per min. Multistage pumps are built in all standard sizes up to a maximum capacity of 2,000 gal. per min.

Worthington centrifugal pumps have been built in capacities as great as 100,000 gal. per min. against low heads and for pressures as high as 1,400 lb. per sq. in.

## Power Pumps

Worthington power-driven reciprocating pumps for direct, geared or belted connection to electric motors, oil engines, waterwheels, etc., are built in many types—single, duplex and triplex; horizontal and vertical; single-acting and double-acting. They are built in all capacities with pressures ranging from less than atmospheric up to 12,000 lb. per sq. in. Patterns are available for combinations of capacity and pressure requiring up to 1,500 hp.

## Deep-Well Pumps

Worthington reciprocating types are as follows: single-plunger, both single-acting and double-acting; two-plunger and three-plunger, single-acting.

Rotating types are the AXIFLO (Reg. U. S. Pat. Off.) and CONIFLO (Reg. U. S. Pat. Off.). The AXIFLO Pump is so compact that it can be used in wells too small for a plain centrifugal deep-well pump and gives maximum capacity for any size of well. Where diameter of well is large in proportion to the capacity required, the CONIFLO is used. It com-

## WORTHINGTON

bines the characteristics of the AXIFLO and plain centrifugal types, giving high efficiency and non-overloading of motor with variation in capacity. AXIFLO and CONIFLO types cover a range from 7,000 g. p. m. at 100 ft. head up to 400 ft. head with corresponding reduced capacities.

## Sump Pumps

For removing liquids intermittently from basins, tanks or pits, the Worthington Pump and Machinery Corporation builds two types of sump pumps, namely Centrifugal and AXIFLO. The AXIFLO type is furnished complete with motor and float-switch control and requires only one pipe.

## Diesel Oil Engines

The Worthington Pump and Machinery Corporation manufactures a complete line of Diesel oil engines. They include: single-acting, two-cycle solid-injection type, in powers from 50 to 540 hp.; single-acting four-cycle air-injection type, from 300 to 800 hp.; and the double-acting, two-cycle type, from 500 to 12,000 hp.

## Gas Engines, Power & Compressing Units

Worthington gas engines for natural or blast furnace gas are of the horizontal, four-cycle, double-acting type. They are regularly made for power and compressing services in sizes ranging from 160 b. hp. to 5,000 b. hp. Compressor cylinders of compressing units are of the universally known FEATHER Valve Type.

## Feather Valve Compressors

(Reg. U. S. Pat. Off.)

All Worthington Air, Gas and Ammonia Compressors are equipped with FEATHER Valves, consisting of light strips of flexible ribbon steel, which lift into recesses in the guard.

Horizontal compressors are as follows: Single-stage belt, steam and direct-connected motor-driven up to 12,000 cu. ft. per min. capacity; two-stage unaflo steam engine driven up to 6,000 cu. ft. per min. capacity; two-stage motor driven up to 8,000 cu. ft. per min. capacity.

Motor-driven compressors are equipped with either three or five-step variable capacity control. Vertical belt-driven compressors are available up to 50 cu. ft. per min. capacity.

## Condensing Equipment

Worthington manufactures surface condensers from the small standard sizes for reciprocating engines or turbines to those required by steam turbine driven generator units of 200,000 kw. capacity; barometric condensers of the parallel or counterflow type for power units where the water is bad or for evaporator service; and jet condensers. Each installation is equipped with Worthington high efficiency auxiliary apparatus.

## Meters

Oil meters for cold oil and also for hot oil, are made in horizontal duplex piston displacement type, vertical plunger displacement type and disk type. Capacity range is for flows of from 1/4 gal. per min. up to 400 gal. per min. Cold water meters (disk, turbine-velocity and compound types) cover the entire range of capacities from flows of 1/4 gal. per min. to 10,000,000 gal. in 24 hours. For continuous operation on boiler-feed service, the disk type meter covers a range of capacity from 25 to 300 hp. the turbine-velocity type from 200 to 6,000 hp. For boiler and fuel-testing work, the positive displacement type from 25 to 3,000 hp.

## Feedwater Heaters

Worthington Stationary Feedwater Heaters are made in open and closed types. The open type is so constructed as to be easily maintained at maximum efficiency.

**SARCO**

**Temperature Regulator**

Because of its remarkable simplicity, its extreme sensitiveness to the slightest fluctuation, and its positive action in holding the heat at a desired point—the Sarco is absolute assurance that correct temperature curves will be obtained, and the highest quality of production maintained.

Sarco Temperature Regulator is entirely self-contained and self-operated—operating on the principle of expansion and contraction of a supersensitive liquid. No electricity, compressed air, water or other outside agencies required, consequently it costs nothing to operate.

Has no perishable parts. The Sarco costs less than other heat controls, and is easier to install.

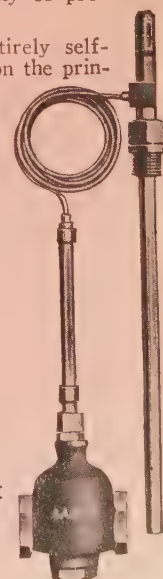

Write for particulars of our 30-day free trial offer. If Sarco isn't satisfactory, simply return it—there is no obligation on your part.

Tanks as listed are furnished with  $\frac{3}{16}$ " or No. 10 Gauge Roofs. Each Tank equipped with one 20" Diameter Bolted Cover Manhole in Shell; one 20" Diameter Hinged Cover Manhole, Gas Tight, in Roof; Inlet and Outlet Flanges. Drawings of each size giving complete specifications will be furnished on application. Code Word refers to Tank with  $\frac{1}{16}$ " Roof. For tank with No. 10 Roof add Code Word—WYRIT—to Code Word given above.

Prices on the above sizes are offered for the material knocked down, prepared for erection for domestic or export, or for delivery and erection by us wherever transportation is available.

Our bulletin No. 100 R covers horizontal, cylindrical tanks in capacities from 1600 to 24,000 gallons. We make a specialty of steel tanks knocked down for export.

# SARCO Self-Adjusting STEAM TRAP

Simply screw the Sarco Steam Trap No. 9 into your pipe-line and it is ready for business at pressures from 0 to 100 lbs. It is self-adjusting—nothing to adjust.

That saves time. Saves work. Eliminates possibility of wrong adjustment by inexperienced help.

It drains all condensation as soon as formed. Doesn't leak—doesn't waste steam. There is no steam hammer. Cannot air bind.

Is simple in operation. Has only one moving part—nothing to get out of order.

Needs no floor space or building up, and can be placed anywhere on the line in upright position.

It costs about one-third the price of bucket or float traps.

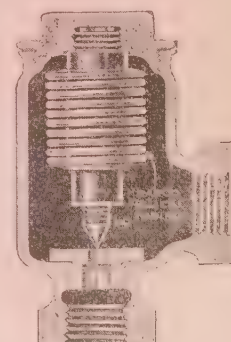

Sold on 30 days' free trial.

Booklet 253 on request.

Fig. 325  
Screwed, Jenkins  
Standard Iron Body  
Gate Valve

Don't put "transients" in your pipe lines. Install valves you can forget—valves that prove their true economy by giving years of trouble-free service. Put in genuine Jenkins Valves. Make sure the Jenkins "Diamond" is on every one. This mark protects engineers in the oil industry from valves in the "transient" class.

Fig. 352  
Screwed, Jenkins  
Standard Bronze  
Swing Check  
Valve

A Jenkins Valve has reserve strength. It must have reserve strength to make good in service tests before it leaves the Jenkins factory. It is strongly built and well designed for the service for which it is recommended. Metals used are proved by analyses before and after casting.

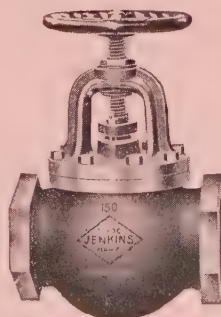

Fig. 141  
Screwed, Jenkins  
Standard Iron Body  
Globe Valve

There is a genuine Jenkins Valve for practically every valve requirement. At supply houses everywhere.

You can obtain, when you so order, Jenkins Valves specially packed and tested for oil service.

CRACKING PROCESS DEVELOPEMENT HAS GRADUALLY BUT STEADILY GIVEN A HIGHER TEMPERATURE MEANING TO THE TERM "HOT OIL."

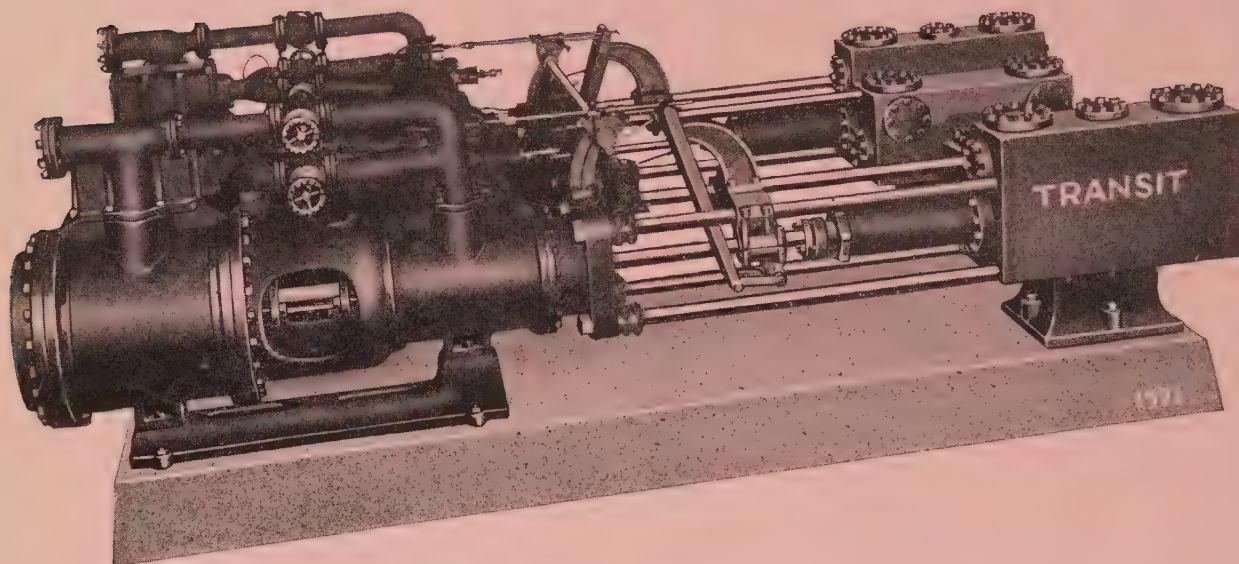

WE ARE READY TO MEET THE NEW CONDITIONS WITH PUMPS HANDLING HOT OIL AT PRESSURES OF 1250 LBS. OR MORE, AND AT TEMPERATURES OF APPROXIMATELY 1000° F.

TYPES—SINGLE CYLINDER, STEAM; DUPLEX, STEAM; TWIN SINGLE, STEAM AND VERTICAL TRIPLEX, POWER. DESCRIPTIONS ON REQUEST.

Twin-Single

## Hot Oil Pumps

1. **UNVARYING CAPACITY.** These pumps will deliver an exact quantity of Hot Oil per minute, per hour, per day, per week, and we don't mean PLUS OR MINUS so many gallons.

2. **UNIFORM FLOW.** The discharge is steady and constant. One side of the pump begins its stroke at the same time the other side finishes its stroke. They are kept in step by our synchronized valve motion. The characteristic duplex pump "dwell" is absent.

3. **NON-STOP OPERATION.** And it won't stop unless you stop it. Suppose something happened to one side of the

pump, which necessitated repairs—throw a short lever, and the other side doubles up and maintains the same volume until repairs can be made.

4. **ABSOLUTE SAFETY.** Each side of the fluid end is a steel billet forged into shape; this means no flaws or sand holes to open up some time under the permeative action of the hot oil. The hot part of the piston rod never reaches the packing, because the stuffing box is so long. The stuffing box is water cooled and has two sets of packing and a lantern gland and—but really you should send for the Circular on these pumps.

*TRANSIT PUMPS are made specially for the oil industry—for the producer, refiner and pipe lines. We will be pleased to mail promptly a complete description, with photographs, of any pump we manufacture.*

# NO-NOX

MOTOR FUEL IS  
NON-POISONOUS

## STOPS KNOCKS

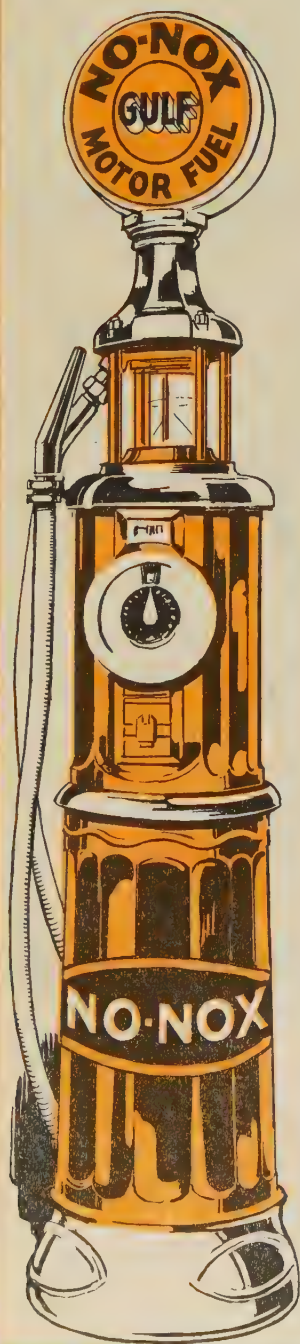

PUTTING the old demon, carbon, to work sounds like a paradox—nevertheless that's just what GULF *No-Nox Motor Fuel* does and here's how it happens: Compression is power. The more compression the more power. Greater compression is secured by reducing the displacement or space in the combustion chamber. Carbon deposits materially reduce this space—old time gasoline would not withstand this added carbon compression—clicks—knocks—pings or detonations of distress quickly following sudden acceleration or heavy pulls.

## OUR GUARANTEE

GULF *No-Nox Motor Fuel* is Non-Noxious, Non-Poisonous and no more harmful to man or motor than ordinary gasoline—that it contains no *dope* of any kind—that the color is for identification only—that it positively will not heat the motor, winter or summer.

GULF *No-Nox Motor Fuel* is priced three cents per gallon higher than ordinary gasoline—and is worth it.

**T**HAT New Improved SUPREME MOTOR OIL is offered to the motoring public as a product of most scientific application of petroleum lubricants to automobile lubrication—and possesses the following features:

*Maintains proper oil pressure.*

*Maintains proper viscosity.*

*Improves lubrication.*

*Increases mileage.*

*Leaves Less Carbon.*

*Flows Freely at Zero, starting with the motor.*

Our research work, laboratory and field tests have proven that such oil more fully meets all the desired requirements of an ideal Motor Oil than do oils manufactured in any of the various ways from other crudes.

We believe a trial would satisfy you—that our claims are conservative and true.

SUPREME MOTOR OIL may be obtained from any Gulf Service Station or any dealer.

# Investigate!

This  
new and  
Efficient  
Product for Treating Crude Oil Emulsions

Operators who believe that expensive equipment is necessary in order to properly treat crude oil emulsions should investigate our new product—BREAXIT.

BREAXIT is a chemical solution for the treatment of crude emulsions, that has been in actual use in fields all over this section for the past two years. It has given such splendid results, and at so low a cost, that the Humble Oil & Refining Company—for whom it was originally developed—has decided to offer it to other operators, as the solution to their emulsion problems.

*BREAXIT  
is packed in  
50-gallon  
wooden barrels.*

(see data under that name); Venezuela Gulf Oil Co. (see data under that name), and Gulf Oil Burner Co. Also owns 75 per cent Colombian Pet. Co. The business conducted by the company includes the producing, refining, transporting, distributing and marketing of petroleum and its products. It is one of the largest oil producers in the United States. Its production from its more than 5,000 wells in the United States exceeds 140,000 bbls. per day. In addition it has a substantial production in Mexico and Venezuela. The total average daily production from the wells of the company in United States and foreign countries is approximately 190,000 bbls. Practically all of the company's oil fields in Okla., Kan., Tex., Ark., and La. are served by its pipe line system, which, exclusive of field gathering lines, exceeds 3,000 mi. Through these pipe lines the company delivered during 1926 more than 46,900,000 bbls. of crude oil. The Port Arthur refinery is one of the largest in the world. In 1926 the company constructed a refinery at Bayonne, N. J. (New York Harbor), with a daily capacity of 20,000 bbls. It has under construction a refinery of equal capacity at Philadelphia. At present the company has in operation a total refining capacity of 150,000 bbls. daily. Ocean-going vessels, having a cargo carrying capacity of more than 1,600,000 bbls., are used to transport crude from foreign fields to the company's refineries and the refined oil to its distributing stations on the Gulf of Mexico and the Atlantic Seaboard, including the ocean terminals of Galveston, New Orleans, Mobile, Tampa, Jacksonville, Savannah, Charleston, Philadelphia, New York Harbor, Providence and Beverly (Boston). From these points the oil is distributed and marketed through more than 1,500 sales stations. In 1926 the company invested about \$5,000,000 in a group of marketing companies in Europe. These companies have terminals and marketing facilities covering the whole of the Continent and the United Kingdom. Report for 1926—gross revenue aggregated \$254,718,424 and the net income available for dividends after increased charges for depr. and depl. amounted to \$35,098,078, against \$35,000,761 in 1925. The consolidated balance sheet on Dec. 31, showed current assets valued at \$103,419,391 and liabilities of \$32,308,784, leaving working capital of \$71,110,607, against \$75,846,658 at the close of 1925. The profits and loss surplus increased to \$135,373,533, equal to more than 100% of the capital stock \$110,367,900 outstanding. Earned \$7.95 a share in 1926; \$7.97 a share in 1925. # OIL METERS

The EMPIRE Oscillating Piston Meter is the best and most convenient instrument procurable for accurate measurement of oils, gasoline, and all other liquid petroleum products. It has no equal for pressure still work and other refinery requirements. EMPIRE meters are made in all sizes, from  $\frac{5}{8}$ " to 6" inclusive, and will handle a great variety of flows and pressures under a wide range of conditions. The style illustrated here is fitted with a large vertical dial that can be moved to face in any one of four directions. The hands can be turned back to zero after any single run without disturbing the total of all the runs, which is shown in the lower part of the dial. Standard horizontal straight reading registers can be furnished, if preferred.

The EMPIRE has been in use for forty years, and has proved itself to be the most accurate, longest wearing, and easiest kept in order of all meters. Its principle of operation—positive displacement by means of an *oscillating* piston—is different from that of every other type of meter offered for oil measuring work.

Bethlehem (Moore) Wax Plant Equipment was the first successful equipment to be placed on the market for extracting wax from distillate.

Now, forty-five years later, Bethlehem (Moore) Equipment is at work in refineries in every part of the United States, Canada and Mexico.

During the past twenty years, over 50 per cent of orders for Bethlehem (Moore) Equipment have come from refineries where the equipment was already in use—a fact that reflects the satisfactory service that Bethlehem (Moore) Equipment gives.

PITTSBURGH, PA., 1820 Oliver Building

AMERICAN FLEXIBLE METAL HOSE is manufactured in several different patterns and is adaptable to any service where hose is used. Primarily, however, it is a heavy duty, high pressure hose and its real value can best be appreciated where hard usage or chemical action render rubber or combination hose incapable of performing their work efficiently. A few of the more common general uses in which AMERICAN FLEXIBLE METAL HOSE can be employed to advantage are the conveying of steam, water, oil, grease, tar, asphalt, creosote, gasoline, paint, varnish, caustic solutions, cutting compounds, air, gas, dust, chips, filings, etc.

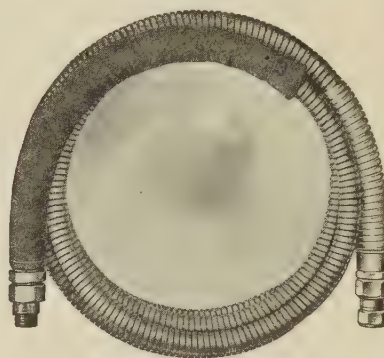

AMERICAN FLEXIBLE STEEL OIL HOSE is a pressure hose formed from a heavily galvanized steel strip. It is made in all standard sizes from 3/16" to 8" in diameter, inclusive. Soldered-on Couplings having an Iron Pipe Thread equivalent to the inside diameter of the hose are generally supplied on Oil Hose. Steel Oil Hose, unlike rubber or combination hose, is not rotted and destroyed by the chemical action of oil or grease but is actually improved by constant contact with them. Oil products to-

gether with the heavy coating of galvanizing on the hose act as a doubly effective preventative against rusting or corrosion. Oil also keeps the interlocking joints of the hose well lubricated and its flexibility at the maximum. AMERICAN FLEXIBLE STEEL OIL HOSE is used as temporary or permanent oil or grease lines, and for conveying cutting compounds and caustic solutions. It is always a quick and dependable conductor for unloading Tank Cars of oil, tar and asphalt.

AMERICAN FLEXIBLE BRONZE STEAM HOSE differs from Oil Hose only in that it is formed from a high tensile strength phosphor bronze instead of a steel strip and is generally equipped with packed-on, heat-proof Iron Pipe Thread couplings instead of soldered-on couplings. Some of the advantages which AMERICAN FLEXIBLE BRONZE STEAM HOSE possesses over

COIL OF BD 15 BRONZE STEAM HOSE WITH A SET OF NO. 1 PACKED COUPLINGS ATTACHED AND ONE END INSULATED TO PERMIT EASY HANDLING

rubber or combination hose are that steam even at high pressures and temperatures will not cause it to vulcanize or crack, there is no danger of its softening, swelling and cutting down on the volume of steam, the couplings cannot blow off, and it retains its effectiveness even after long periods of idleness. A few of its most prominent uses are steaming Tank Cars of heavy oil, tar, or asphalt prior to or during the unloading operation, blowing boiler flues, and for fire prevention work around oil stills. As a matter of fact, just as with our Oil Hose, it can be used advantageously and economically wherever a temporary or flexible connection is necessary. Because of chemical action, Galvanized Steel Hose instead of Bronze Hose should be used for conveying super-heated or dry steam.

Literature describing our complete line of Hose and Couplings, in the form of catalogs and special folders will be mailed upon application. A Technical Department with eighteen years experience with Flexible Metal Hose and a large general experience with all Hose problems, offers its assistance to anyone desiring specific information on Flexible Metal Hose as applied to any particular service or services.

## The Ideco Line is Complete

The International Derrick & Equipment Company is the world's largest manufacturer of Galvanized Structural Steel Products for Oil Field Production. The line embraces practically every unit required in drilling for oil except power, pipe and tools.

"Ideco" equipment is backed by experience from thousands of Ideco installations in the service of major oil companies under all imaginable conditions in almost every oil and gas field on this and foreign continents. It represents the application of the highest standard of approved engineering theories and formulas, first grade material and manufacturing processes.

The superiority of the Steel Derrick over the Wooden Derrick need not be dwelt upon—its ef-

ficiency has been proven in practically every field. The question today is, "What kind of a steel derrick shall I buy?" Consider them all, and then remember that International "Ideco" offers you a structural steel derrick of new, first grade material—with Wheels, Crown Blocks, Walking Beams, Pitmans, Buildings, etc.—all—protected against rust indefinitely by the hot dip galvanizing process applied after fabrication. The paint pot is unknown on an "Ideco" equipped well, and repairs are reduced to practically nothing.

Ideco Warehouses and Yards, local to every active field, stand ready to provide the operator with quick delivery and satisfactory service at all times.

**PAN AMERICAN PETROLEUM & TRANSPORT CO.**, 120 Broadway, New York. Controlled by Pan American Eastern Petroleum Corp., a Delaware holding company organized Mar. 1925, by Standard Oil Co. (Indiana) and British interests to acquire controlling stock from E. L. Doheny and associates, totalling 501,000 shares out of 1,001,556 outstanding. Doheny group retain substantial ownership of shares in original company being next largest shareholder to Pan American Eastern Petroleum Corp., no statement being made as to amount paid for stock. Conservative estimates valued the shares sold at \$38,326,500 based on market quotations then current with \$50,000,000 placed as outside price for control. Sale of control included all properties excepting holdings in California which were transferred to the Doheny interests through another newly organized company, Pan American Western Petroleum Co., which the Dohens organized for purpose and which paid \$12,150,000 cash and issued \$11,250,000 15-yr. 6% gold notes for the California properties taken over. Coincident with purchase of control by the Standard of Indiana interests and division of the assets, Pan American Petroleum & Transport acquired control of British Mexican Petroleum Co., Ltd., an important European fuel oil marketing connection of the old Doheny company. This company held about 26% of stock of the Lago Petroleum Co. and in Nov., 1925, control of Lago was obtained by Pan-American Petroleum & Transport Co. through purchase from Naphen & Co., of former holdings of J. S. Cosden together with original Naphen holdings, Naphen having organized Lago originally. Control of Lago was subsequently turned over to a new company, Lago Oil & Transport Co., organized by the controlling Standard Oil (Ind.) interests, and to which was also turned over 51% of common and all the preferred stock of Lago Oil & Transportation Co., Ltd., of Canada, a company holding a contract to acquire all oil production of Lago Petro-

leum Co. Later sold properties of British Mexican Petroleum Co. in Great Britain to Anglo-American Oil Co., retaining its American properties. Pan American Petroleum & Transport Co. was organized by E. L. Doheny and associates in Del., 1916, as a holding company for various large companies engaged in producing, refining, transporting and marketing crude oil and refined products in the U. S. and Mexico. Present owned, controlled and subsidiary companies include; The Caloric Co., Inc., Mexican Petroleum Co., Ltd., of Del., Mexican Petroleum Co. Magnolia Petroleum Co. of Texas, which succeeded the old Magnolia Pet. Co., General Petroleum Corp. of Calif. and Standard Transportation Co. Acquired complete ownership of the old Magnolia in Nov. 1925, following exchange of stock of Magnolia's minority shareholders on the basis of four shares of Standard for each share of Magnolia. Prior to exchange of stock, Standard owned about 70% of Magnolia shares and to facilitate exchange increased its authorized shares from 9,400,000 to 15,000,000, par value \$25, declaring a 25% stock dividend to its stockholders and extending this dividend to Magnolia stockholders who offered their shares for exchange. Magnolia stockholders unwilling to exchange were paid \$188.22 cash for each share. To facilitate the merger, a new company, the Magnolia Petroleum Co. of Texas, was organized in Texas in Nov., 1925, to take over the assets of the old Magnolia, which was a joint stock association, and upon the formal taking over of these the new company increased its nominal capital of \$18,000,000 to \$185,000,000 to cover the assets. Also in May, 1926, Standard Oil Co., of N. Y. acquired General Petroleum Corp. of Calif. for 2,320,364 shares of S. O. of N. Y. at par value of \$58,009,100. Standard Oil Co., of N. Y. was organized N. Y., 1882. *Annual meeting:* Last Thurs. May. *Officers:* H. C. Folger, chm.; H. L. Pratt, pres.; E. R. Brown, C. M. Higgins, H. E. Cole, C. F. Meyer, John Barneson, v.p.s.; F. S. Fales, sec.; R. P. Tinsley, treas.; A. F. Corwin, mgr. of prod. *Authorized capital:* 17,500,000 shares com., par \$25, issued 16,760,931 shares. *Divs.* \$1.50 per share in 1926. *Earnings:* Consolidated earnings of the company and its subsidiaries during the last five fiscal years (fiscal years ended December 31 for Standard Oil Company of New York and subsidiaries and for Magnolia Petroleum Company being consolidated with the fiscal year ended the previous June 30 for General Petroleum Corporation) have been as follows: 1921, gross, \$49,501,777; depreciation and depletion, \$25,694,632, net, except Federal taxes, \$23,807,145. 1922, gross, \$55,873,485; depreciation and depletion, \$24,681,526; net, except Federal taxes, \$31,191,959. 1923, gross, \$55,723,510; depreciation and depletion, \$26,041,040, net, except Federal taxes, \$29,682,470. 1924, gross, \$69,430,292; depreciation and depletion, \$27,320,306, net, except Federal taxes, \$42,109,986. 1925, gross, \$86,591,500; depreciation and depletion, \$29,935,238, net, except Federal taxes, \$56,656,262. These above earnings include results of operations of Magnolia Petroleum Company and General Petroleum Corporation for the entire period on the basis of the present 100% ownership of the properties of those companies by Standard Oil Company of New York or subsidiaries. *Funded Debt:* The company and its subsidiaries have outstanding \$20,000,000 6½% debentures, due 1933 (non-callable prior to 1928); \$13,500,000 Magnolia Petroleum Company Serial 4½% Debentures, due 1927-1935; \$19,196,000 General Petroleum Corporation First Mortgage 5% Bonds, due 1940 (under the mortgage securing this issue bonds are reserved for retirement of the Five-Year 6% notes hereafter mentioned and \$6,543,500 additional bonds may be issued); and \$9,260,500 General Petroleum Corporation Five-Year 6% Notes, due 1928; \$50,000,000 Standard of New York Twenty-Year 4½% Debentures, due Dec. 15, 1951. *Oil production:* The company does not own or operate directly any oil producing properties, but indirectly, through its subsidiaries, Magnolia Company and the General Petroleum is engaged in the producing business in the principal oil fields of the Mid-Continent and Southwestern States and of California. Magnolia holds and operates oil producing properties in the principal oil fields in the States of Texas, Oklahoma, Kansas, Louisiana and Arkansas. In addition, it has under lease and in fee a large acreage of undeveloped lands in the States mentioned and in New Mexico, also

in Mexico it owns through subsidiaries prospective oil lands and has a small production near the Panuco field. General Petroleum holds and operates oil properties in California, located in the principal oil fields of that State. The gravity of the oil varies from 12 degrees A. P. I. to 36 degrees A. P. I. It owns and operates, through subsidiary companies, a small production in Wyoming and Mexico and extensive acreage not yet proven in California, Colorado and Alaska. In 1925 the net production of crude oil of the Magnolia and General Petroleum was: Magnolia, 15,671,941 bbls.; General Petroleum, 6,931,557 bbls.; Production first nine months of 1926 was: Magnolia, 15,281,099 bbls.; General Petroleum, 5,639,617 bbls.; Sept., 1926, daily average, Magnolia, 61,918 bbls.; General Petroleum, 23,750 bbls. *Pipe line system:* The company does not operate directly any pipe line system, but its subsidiaries, the Magnolia Petroleum Company and the General Petroleum Corporation of California, each has pipe line systems operated by subsidiaries. Magnolia, by its wholly-owned subsidiary, Magnolia Pipe Line Co. owns and operates an oil pipe line system with trunk lines connected with its refineries and extending from seaboard to various oil fields of Texas, Oklahoma, Louisiana and Arkansas, with gathering lines connected with its own and other oil-producing properties in these fields. Its present trunk line system consists of the following pipe line mileage: 8-inch, 2,172-miles, 6-inch, 231-miles, 5-inch, 69-miles, 4-inch, 58-miles. It has also a gathering system consisting of 1,334 miles of lines tributary to its trunk line system. This system is delivering a daily average of 80,000 barrels of crude oil to the Gulf Coast, in addition to supplying the requirements of its inland refineries at Luling, Corsicana, and Fort Worth. The total daily pipe line receipts for the month of September, 1926, averaged upwards of 97,000 barrels. General Petroleum, by its wholly-owned subsidiary, the General Pipe Line Company of Calif., owns and operates an oil pipe line system connected with its refineries, having a main trunk line 184 miles in length, extending from the San Joaquin Valley oil fields in Kern County to the company's terminal at Los Angeles with a branch line from Lebec to Mojave and other branch lines in Kern County and the Los Angeles basin. It has gathering lines which serve all the principal fields in southern and central California, with the exception of Coalinga, Ventura and Kern River. Its present trunk line system consists of the following pipe line mileage: 8-inch, 259 miles, 6-inch, 123 miles, 4-inch, 16 miles. The maximum capacity of the system is over 100,000 barrels per day for delivery of crude to the Vernon refinery of the company and it not only handles the company's production but oil purchased in the above mentioned fields. It also handles all residuum and refined products from the Vernon refinery to tidewater, as well as any crude to be handled by boat in coastwise or transoceanic trade, with a capacity for this purpose of 50,000 barrels daily. The total daily pipe line receipts for the month of September, 1926, averaged upward of 70,000 barrels. *Refinery properties:* The company owns and operates refineries in the cities of New York and Providence with waterfront facilities for ocean transportation, and at Buffalo with waterfront facilities for lake and canal transportation. Its subsidiary, the Magnolia Petroleum Company, owns and operates refineries in Texas, at Beaumont and Magnapetco, with waterfront facilities for ocean transportation, and at Corsicana, Fort Worth and Luling in the interior. Its subsidiary, the General Petroleum Corporation of California, owns and operates a refinery at Los Angeles, connected by pipe lines with the deep water terminal of the company, and also a refinery at Lebec in the interior of California. This subsidiary also owns a topping plant at Tampico, Mexico, not now operat-

ing, with water facilities on the Panuco River. All the refineries in the United States have rail facilities. The New York Company's refineries are: New York Harbor, 23,000 bbls. capacity; gasoline, kerosene, gas and fuel oils, lubricating oils, wax, grease, candles, coke and specialties. Buffalo, 3,500 bbls. capacity; gasoline, kerosene, gas and fuel oils, lubricating oils, wax and coke. Providence, 10,000 bbls. capacity; gasoline, kerosene, gas and fuel oils, road binder and coke. These refineries have cracking stills, Burton-Cross process, with capacity to run 9,000 barrels of cracking stock daily. The Magnolia refineries are: Beaumont, 50,000 bbls. capacity; gasoline, kerosene, gas and fuel oils, lubricating oils, wax grease, coke and asphalt. Corsicana, 3,000 bbls. capacity; gasoline, kerosene, gas and fuel oils. Fort Worth, 15,000 bbls. capacity; gasoline, kerosene, gas and fuel oils, and distillate. Luling, 5,000 bbls. capacity; gasoline, fuel oil and distillate. Magpetco, 15,000 bbls. capacity; gas oil, fuel oil and distillate. The Beaumont refinery has high pressure cracking stills with a capacity to run 35,000 barrels of cracking stock daily and Fort Worth 2000 barrels of cracking stock daily. General Petroleum's refineries are: Vernon, 50,000 bbls. capacity; gasoline, distillates, gas and fuel oils. Lebec, 10,000 bbls. capacity; distillate and fuel oil. Tampico, Mex. 20,000 bbls. capacity; gasoline and fuel oil. (Topping plant not operating.) *Casinghead gasoline:* The Magnolia owns and operates 47 casinghead gasoline plants for extracting gasoline from casinghead gas in Texas, Oklahoma, Arkansas and Louisiana. The total output of gasoline from these plants for the first nine months of 1926 was 461,716 barrels of 50 gallons, the gas after the extraction of the gasoline being utilized in the business. General Petroleum owns and operates casinghead gasoline plants at Ventura and Tonner in California, and also owns a half interest and operates a plant at Santa Fe Springs jointly with the Chanslor-Canfield Midway Oil Company. The total output of gasoline from these plants for the first nine months of 1926 was 221,022 barrels of 50 gallons, the gas after the extraction of the gasoline being utilized in the business. *Natural gas business:* Magnolia through its wholly-owned subsidiary, the Magnolia Gas Company, a corporation organized under the laws of the State of Texas, is also engaged in the business of producing and marketing natural gas. Its main lines are connected with its Beaumont and Magpetco refineries and extend to the oil fields of Louisiana and East Texas, from which it obtains its principal supply of natural gas, partly from its own production and partly from purchases. Through these lines it supplies its own refineries at Beaumont and Magpetco with natural gas for fuel, as well as supplying a number of communities and other consumers along its lines, and at Beaumont. There are connected with this system at this time one hundred and fifty-three wells of its own with a daily open flow capacity of 1,150,000,000 cubic feet at high pressure. It also has contracts covering the purchase of gas in the fields to which its pipe lines extend so long as gas is produced on the acreage covered by the contracts. The main line consists of 14-inch, 16-inch and 18-inch pipe, the total distance of the main line to Beaumont being 227 miles, and the line will deliver approximately 60,000,000 cubic feet per day. This company also has a gasoline plant at Latex which extracts from the gas before marketing from 4,000 to 6,000 gallons of gasoline per day. General Petroleum disposes of residual dry gas, after removing the gasoline, to public utility gas companies supplying Los Angeles and neighboring towns. *Marketing:* Standard Oil Company of New York owns tracts of land in all of the larger cities and towns and in other locations, throughout the States of New York, Connecticut, Rhode Island, Massachusetts,

Vermont, New Hampshire and Maine, upon which are the necessary tanks, buildings, and equipment for storage and tank wagon distributing plants, and also for service stations for marketing its products. It has in these 526 storage and tank wagon distributing plants in operation having steel tankage for storage, office buildings, warehouses, garages and other modern equipment, practically all of the construction being fireproof. Many of these storage and distributing plants have frontage on navigable waters for tankers or smaller boats and barges, with docks, pipe line connections, equipment and facilities for loading and discharging bulk cargoes as well as products in barrels or cases, in addition to railroad connections, switching and trackage facilities for handling incoming and outgoing freight. The company has approximately 3,913 motor tank wagons, trucks and vehicles used in delivering its products from these distributing plants to its customers and to its own service stations. It owns and operates 1,159 service stations, equipped with buildings, storage tanks, pumps and equipment. It has approximately 67,800 pumps with tanks and facilities, either at its own service stations or at the business places of its customers, for the retail delivery of gasoline and kerosene to consumers. The company also owns tracts of land in countries of the Far and Near East and in South Africa, upon which it has storage and distributing plants for the storage, distribution and marketing of its products. It has large storage plants located on deep water at various seaports or locations on navigable rivers, with necessary wharfrage, docks, pipe connections, tankage, warehouses, and other facilities for loading and discharging ocean-going tankers and cargo vessels and storing the products marketed. Magnolia owns lands upon which it has storage and distributing plants and tank wagon and service stations throughout the States of Texas, Oklahoma, and at various points in Arkansas, New Mexico, Kansas and Louisiana, through which it markets gasoline and other petroleum products, with warehouses and railroad connections, and some with water frontage and facilities. It owns and operates directly in these states approximately 623 storage and tank wagon distributing stations, 332 service stations, 136 iron barrel stations and also has 1,945 service stations which it operates through agencies. It owns and operates in its marketing business 1,152 cars, and approximately 1,242 motor tank wagons, trucks and autos. General Petroleum, directly and through its subsidiaries, has approximately 28 storage and distributing stations in the States of California, Oregon and Washington, and one in Alaska, through which it markets gasoline and other petroleum products. Its stations at San Francisco, Los Angeles Harbor, Oakland, Seattle, Everett, Portland and Astoria are accessible to deep water tankers as well as having rail connections. It owns 125 tank cars used in transporting products to its distributing stations and customers. It does not operate directly any retail service stations but has approximately 706 motor tank wagons, trucks and autos used in its marketing business. *Marine equipment:* The company, through its subsidiaries, the Standard Transportation Company (Delaware), and the Standard Transportation Company, Ltd., of Hong Kong, owns and operates forty tankers. These tankers are employed in transporting the company's various products, some being used to transport crude to its refineries and gas oil, fuel oil and gasoline in its coastwise and intercoastal service, but the major portion of this deep-water fleet is engaged in the trans-oceanic distribution of finished products to the distributing stations maintained by the company in the Near and Far East. In addition to these ocean-going tankers, the company, directly and through its subsidiary, the Standard Transportation Com-

The syndicate acquired the interests formerly held in the Associated by the Pacific Oil Co. which interest, approximating 55% of the Associated stock, was distributed in connection with the terms of the merger of the Pacific Oil Co. and the Standard Oil Co. (California). The syndicate paid \$58.50 a share. Subsequently stockholders of both the Associated and the Tide Water were offered the privilege of exchanging their shares in these companies for shares in the new holding company. Associated stockholders were offered one-third share of pref. and one share of com. stock of the new company for each share of Associated common. They had an alternative of accepting \$58.50 a share for their stock. Tide Water stockholders were offered new company stock on the basis of one and one-third shares of new company common for each one share of Tide Water stock held. There was no alternative cash offer to Tide Water stockholders, and all of the latter did not accept the stock exchange, but retained their interests in the original company.

# MERIT WORKING BARREL

## A Tested Suction and Displacement Pump!

Reduces operating expense.  
Increases production.  
Eliminates frequent rod  
pulling.

### The Merit Working Barrel

Will pump floating sand.  
Has neither cups nor rings.  
Will not cut oil.  
Automatically packs itself.

In designing the Merit Working Barrel, all the weak points and faults of working barrels heretofore have been taken into consideration and practically eliminated.

The main features are:

1. Automatic take-up on packing.
2. Special design to pass liquid through hollow plunge without coming in contact with packing.
3. Special construction to permit pulling the standing valve without disarranging packing.
4. Ability to pump all grades of fluids from the heaviest to the lightest from all depths.

The Merit Working Barrel will solve your Working Barrel problems. Four years actual use back up our every claim for it.

Write for complete information.

Feb. 15, 1927, reg. div. of 63c was declared and an extra div. of 25c a share. *Marketer*: Gasoline, kerosene, lubricating oils and other refined products in Neb. Products branded "Red Crown," "Polarine." Has 340 bulk stations and 120 filling stations. Balance sheet for 1926 shows total assets of \$7,263,907. Cash was \$963,574; accts. rec. \$328,155; investments, \$1,989,088; plant, less depr., \$2,932,249. Liabilities included surplus of \$2,040,017 and accts. pay. \$496,911. Company does not supply an earnings statement but a comparison with the previous year's report indicates earnings after all charges of \$917,756, equal to \$5.03 a share on the \$25 par value stock. As of Dec. 31st, 1925, the surplus acct. was \$3,312,438. In April the company paid a stock div. of 50% on \$3,012,400 capital stock, thus transferring \$1,506,200 from surplus to capital acct. At the close of 1926 the surplus acct. was \$2,040,016 and taking into consideration the stock div. there is an actual increase in surplus acct. of \$233,779 after all chgs. The div. distribution during 1926 amounted to \$683,977, at the rate of \$3.75 a share, which indicates earnings available for dividends of \$917,756. In 1925, the indicated earnings available for dividends were \$983,047 equal to \$32.63 a share on the 30,124 shares outstanding at the end of 1925. This would be equal to \$5.53 on the \$25 par value stock. The book value as of Dec. 31st, 1926, was \$36.18 per share of \$25 par value.

# Two Great Firms Serving One Great Industry

Oil Men who began in Pennsylvania yesteryear may be operating in Oklahoma or Wyoming today, and vice versa.

It's a great country and a great industry where

"...there is neither East nor West,  
Border nor Breed nor Birth,  
When two strong men stand face to face,  
tho' they come from the ends of the Earth!"

We deem it an honor and a privilege, and at the same time a grave responsibility to serve this industry nationally as we have done and are now doing.

Some of our lines are so old and so excellent as to enjoy a vast majority of all available business. Others are newer, but forging ahead as only really superior equipment can do. We sell no single item to the industry for any reason other than the fact we believe it to be the best of its kind made.

Lines handled jointly are listed below. Other important lines will be found in the alphabetical "Buyers' Guide" elsewhere in this volume.

# McCORD RADIATOR & MFG. CO.

Manufacturers of Force Feed Lubricators for Gas Engine, Diesel Engine, Compressor and Pump Use

DETROIT, MICH.

NEW YORK, N. Y., 285 Madison Ave.

CHICAGO, 817 Peoples Gas Building

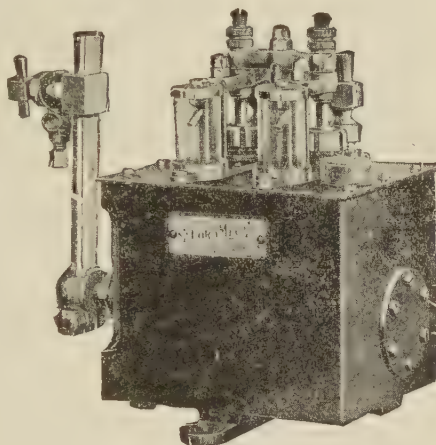

## Products

McCORD FORCE FEED LUBRICATORS; McKIM and McCORD METALLIC ASBESTOS GASKETS.

Also manufacturers of Copper Asbestos Gaskets for Automotive use, Cork Gaskets and Automotive Cooling Radiators.

## McCord Force Feed Lubricators

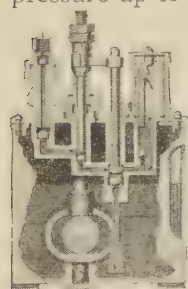

The McCord force feed lubricator is made in from 1 to 14 feeds. Each pump has individual adjustment. A constant sight feed shows how much oil is being pumped to each bearing and this flow can be regulated from one drop to a full stream per stroke. It is positive and automatic in action and operates in perfect unison with the engine or pump. For steam, gas and oil engines, air and ammonia compressors and Diesel engines.

McCORD FORCE FEED LUBRICATOR  
Class B, 4 feeds

## Advantages

- (1) Separate pumps having individual adjustment for each set.
- (2) Positive sight feeds without pressure.
- (3) Delivery of oil against pressure up to 1000 lb. Not affected by viscosity of oil, or variations in steam pressure.
- (4) All working parts of best drop forged steel, case hardened working in oil.
- (5) Auxiliary hand crank for accelerating feed.
- (6) Reversible hand bearing so that the lubricator can be driven from right or left-hand end.
- (7) Built-in heating chamber—plug in base for draining reservoir.
- (8) Finished in black enamel and nickel, or black enamel and brass. Made in either rotary or ratchet drive.

## Economies

- (1) Automatic supply of clean oil in the right place regardless of attention. Amount of oil fed is in proportion to the speed of the machine.
- (2) Reduces machine upkeep costs by preventing slowing up or shutting down of operations for repairs because of inefficient lubrication.
- (3) Materially reduces quantity of oil required because every drop is made to do full duty, thereby saving as high as 50%.
- (4) Reduces cost of attendance as it is frequently possible to do away with the services of one or more oilers.
- (5) Better safety for attendants as it is unnecessary to climb over the machines.
- (6) Fire hazard decreased by eliminating spilling and splashing of oil.
- (7) Better machine operation as bearings can be run looser which reduces shock and vibration with consequent reduction in friction loss.
- (8) Longer life of cylinder walls and pistons result from efficient lubrications.
- (9) Longer life of bearings as an adequate film of oil is provided and overheating prevented.

## Complete Plant Lubricating System

McCord Lubricators of the multifed type are designed to lubricate complete plants from a central point. They deliver oil any distance against any pressure. The oil is conveyed in ⅛-in. pipe.

The saving in oil over hydrostatic lubrication averages 50% not to mention the saving in hard labor and increase in efficiency.

## McCord Service

To render adequate service to all users of McCord lubricators a complete stock of all parts for all lubricators ever made by the company is maintained at all times. All parts are interchangeable and renewable which makes maintenance cost a minimum.
